

NAME

sos.conf – sosreport configuration

DESCRIPTION

sosreport uses a configuration file at /etc/sos.conf.

PARAMETERS

There are two sections in the sosreport configuration file: plugins, and tunables. Options are set using 'ini'-style **name = value** pairs.

Some options accept a comma separated list of values.

[plugins]

disable Comma separated list of plugins to disable.

[tunables]

plugin.option Alter available options for defined plugin.

EXAMPLES

To disable the 'general' and 'filesystem' plugins:

```
[plugins]
```

```
disable = general, filesystem
```

To disable rpm package verification in the RPM plugin:

```
[tunables]
```

```
rpm.rpmva = off
```

FILES

/etc/sos.conf
