

NAME

mime.convs – mime type conversion file for cups

DESCRIPTION

The *mime.convs* file defines the filters that are available for converting files from one format to another. The standard filters support text, PDF, PostScript, HP-GL/2, and many types of image files.

Additional filters can be added to the *mime.convs* file or (preferably) to other files in the CUPS configuration directory.

Each line in the *mime.convs* file is a comment, blank, or filter line. Comment lines start with the # character. Filter lines specify the source and destination MIME types along with a relative cost associated with the filter and the filter to run:

```
super/type super/type cost filter
application/postscript application/vnd.cups-raster 50 pstoraster
```
