NAME

  fbdevhw – os-specific submodule for framebuffer device access

DESCRIPTION

  fbdevhw provides functions for talking to a framebuffer device. It is os-specific. It is a submodule used by other video drivers. A **fbdevhw** module is currently available for linux framebuffer devices.

  fbdev(4) is a non-accelerated driver which runs on top of the fbdevhw module. fbdevhw can be used by other drivers too, this is usually activated with 'Option "UseFBDev"' in the device section.
