NAME

at.allow, at.deny – determine who can submit jobs via at or batch

DESCRIPTION

The */etc/at.allow* and */etc/at.deny* files determine which user can submit commands for later execution via **at**(1) or **batch**(1)**.**

The format of the files is a list of usernames, one on each line. Whitespace is not permitted.

The superuser may always use **at**.

If the file */etc/at.allow* exists, only usernames mentioned in it are allowed to use **at**.

If */etc/at.allow* does not exist, */etc/at.deny* is checked.

SEE ALSO

at(1), **atrun**(1), **cron**(8), **crontab**(1), **atd**(8).
